0. PREMISE

This document contains a proposal for the updating and extension of eBIZ specifications starting from the eBIZ version released as CEN CWA 16667 in 2013. Under the name of 'Draft version' it is reported the result of an extensive work of analysis and consultation aimed at developing and maintaining eBIZ specifications.

In particular, the content of this proposal is the result of various activities, mainly those carried out within the framework of the **eBIZ 4.0 project** funded by the European Commission, call COS-DESIGN-2015-3-06, topic COS-2015-DESIGN-2.

The technical contents are backwards compatible with the latest official published version.

1. BUSINESS DESCRIPTION

1.1 Scope

The present guide has been issued to assist the companies of the Textile-Clothing sector in the implementation of the standard XML document type "GARMENT KIT DESPATCH ADVISE", providing all the instruction required for its use in any context of e-commerce between Subcontractors and Apparel Producers (or other actors that send the kits on their behalf).

All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

1.2 Generalities

In this scenario, the Fabric Producers agree to send fabrics and accessories ordered by the Apparel Producer to a Logistics Company or directly to the Apparel Subcontractor specified by the Apparel Producer. The Apparel Producer send a Despatch Request of the "kit" to the Fabric Producer or to the Logistics company so that it can make the "groupage (fabric, buttons, fastners. . .)" and send it to the specified Subcontractor.

At this point, the Logistics company (or the Fabric Producer acting as) send the Despatch Advise to the Apparel Producer to confirm the shipping; the same document is sent to the Subcontractor to anticipate the information about the material it will receive.

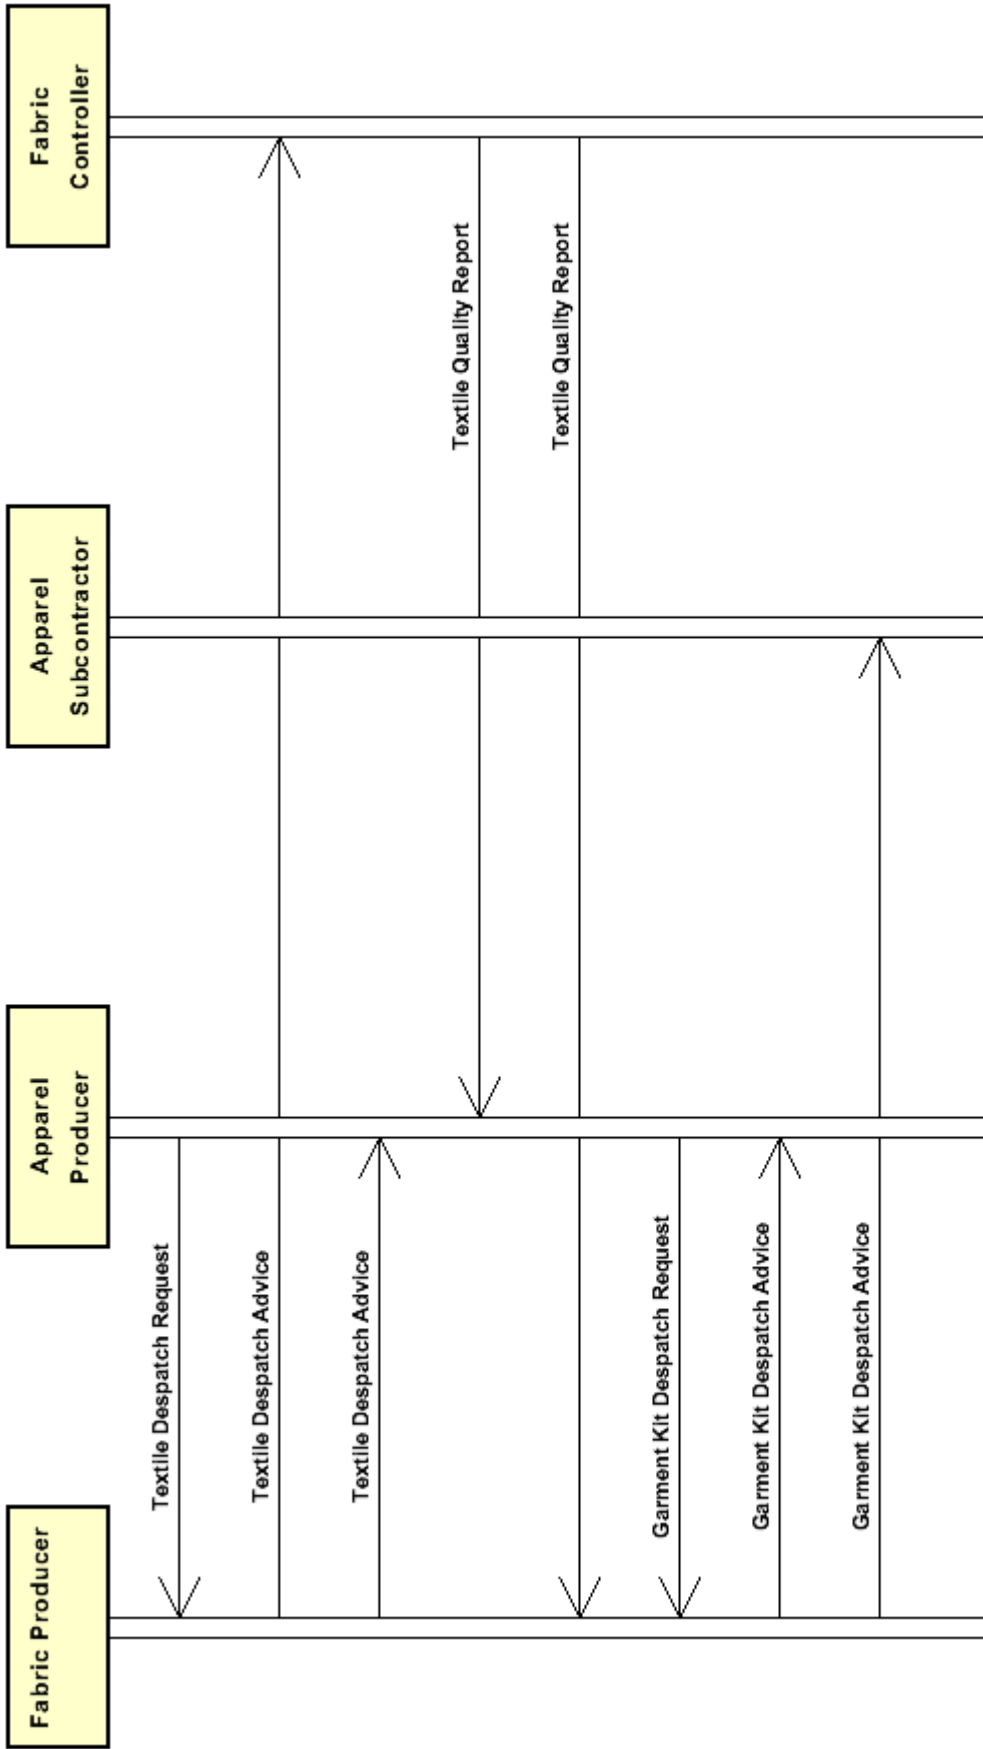

This document is relative to the Despatch Advise of the "kit" and can concern one Subcontractor only.

The basic principles are:

- one line item must correspond to one "kit" and one Subcontractor
- every kit is made of one or more fabrics of which the single pieces can be identified, plus several accessories
- as for the roles: the Apparel Producer is "buyer", the Logistics company is "supplier" and the Subcontractor is "third party"

1.3. Possible scenario

Despatch of fabric with groupage

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.

In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrences); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...)" is shown in square brackets.
