1. BUSINESS DESCRIPTION

1.1 Scope

The present guide has been issued to assist the companies of the Textile-Clothing sector in the implementation of the standard XML document type "Textile DESPATCH ADVISE", providing all the instruction required for its use in any context of e-commerce between Apparel Producers, Fabric Producers and their Subcontractors.

All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

1.2 Generalities

The message is issued to anticipate the details the articles actually despatched. The same message can be used with the client for sale and with the subcontractor for working operation (eg. darn disposition).

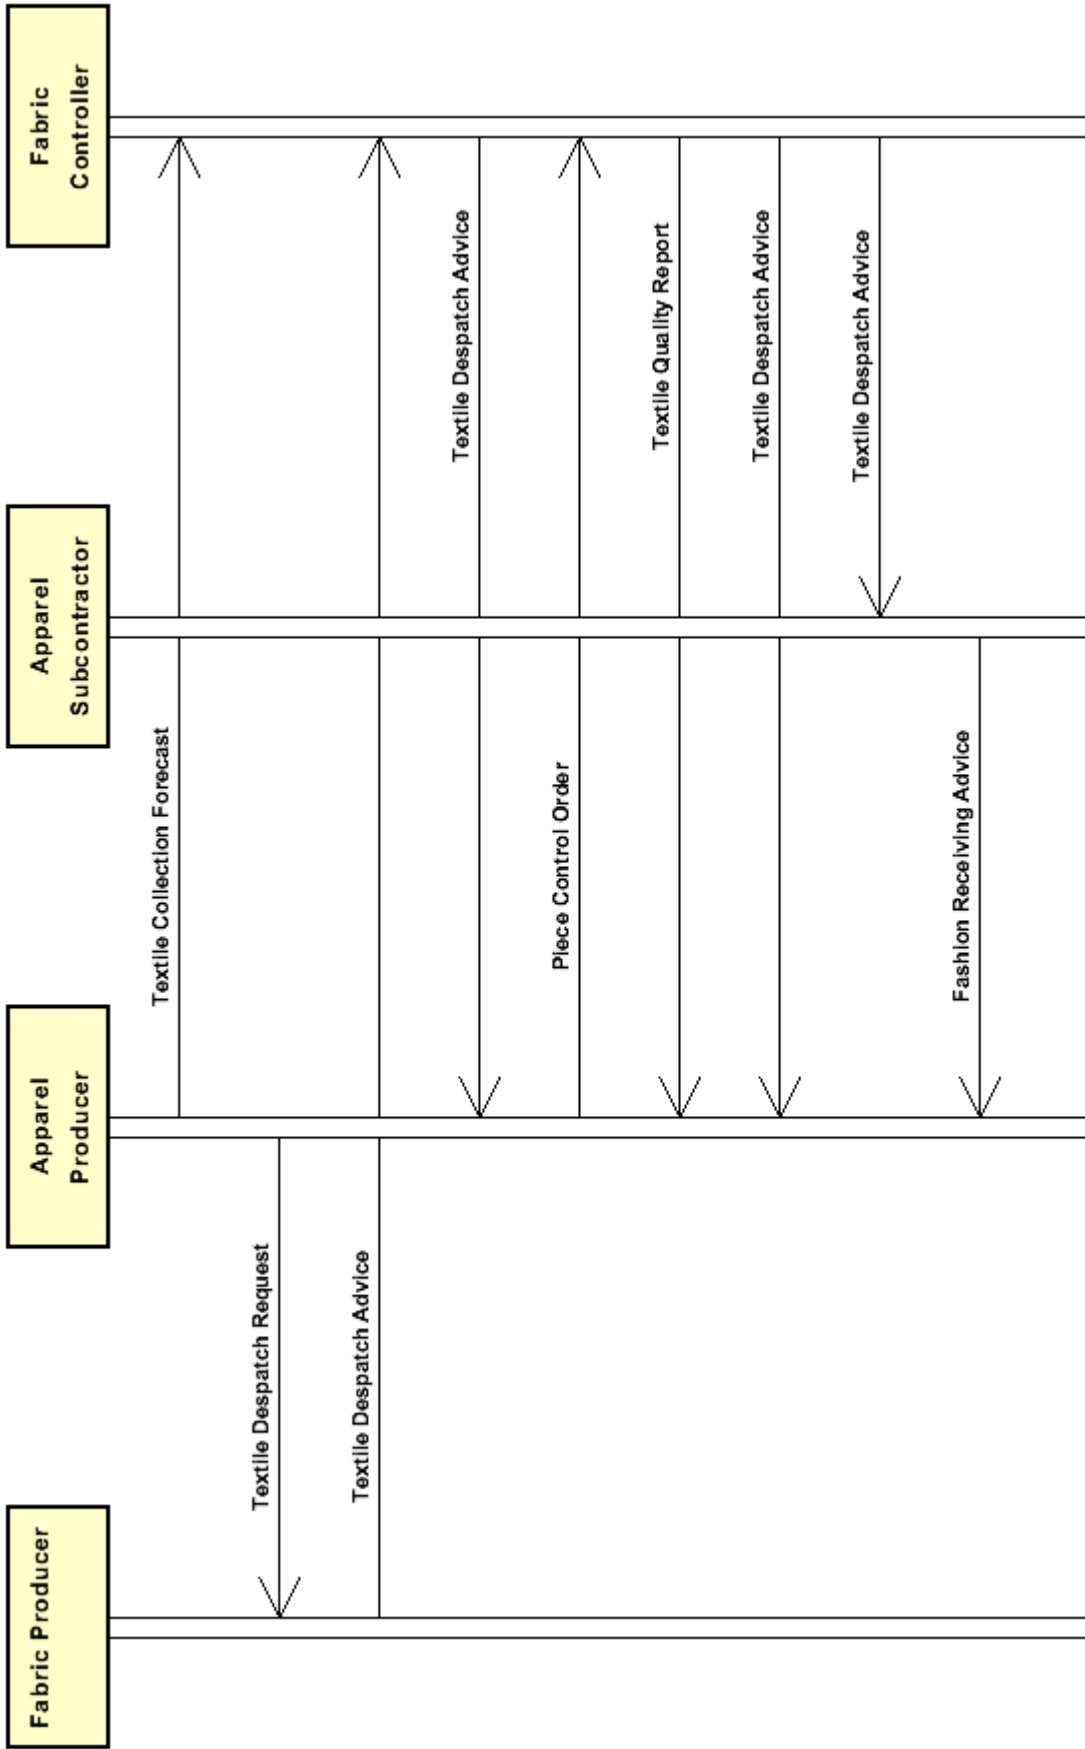

This document can be used:

- as a standard despatch advice
- as a pre-despatch notification of the goods that are to be despatched.

Each document item must correspond with a well defined fabric article (article + pattern + color) and must identify the actual pieces that make it up; for each item is possible to reference the Order line that is delivered.

1.3. Possible scenario

Fabric delivery with quality reporting by controller

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.

In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrences); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...)" is shown in square brackets.

Legenda

- N: new element
- U: updated properties
- P: changes in children
- p: is a changed child
- A: changes in attributes
- a: is a new or changed attribute
- *: is a subtype
