## IMPLEMENTATION GUIDE

# includes COMPARISON BETWEEN CURRENT and LAST PREVIOUSLY RELEASED VERSION TRANSACTION "FASHION RECEIVING ADVICE" 

[^0]
## 1. BUSINESS DESCRIPTION

### 1.1 Scope

The present guide has been issued to assist the companies of the Textile-Clothing sector in the implementation of the standard XML document type "RECEIVING ADVISE", providing all the instruction required for its use in the context of e-commerce in the Textile industry, as shown in the enclosed diagrams.
All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

### 1.2 Generalities

The Receiving Advise can be used by the Receiver of goods (purchased or received for commissioned works) either to confirm the regular receipt of goods or to notify discrepancies between what was declared by the Sender and what was received and accepted.
The present document must always be used in coupling with the Despatch Advise document.
It is recommended to issue one Receiving Advise against one Despatch Advise

### 1.3. Possible scenario

Fabric delivery with quality reporting by controller

## 2. IMPLEMENTATION GUIDE

### 2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.
In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrencies); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...) is shown in square brackets.

## Legenda

- N : new element
- U: updated properties
- $P$ : changes in children
- p : is a changed child
- A: changes in attributes
- a: is a new or changed attribute
- *: is a subtype
