Version: draft Date of release: 17/5/2019 Document code: G066 technical Documentation: http://www.ebiz.enea.it XML Schemas repository: http://www.ebiz.enea.it/moda-ml/repository/schema/draft/default.asp Guides repository: http://www.ebiz.enea.it/moda-ml/repository/guide/draft/default.asp Guide filename: G066-eBIZ-RawMaterialDyeingOrderResponse.pdf

0. PREMISE

This document contains a proposal for the updating and extension of eBIZ specifications starting from the eBIZ version released as CEN CWA 16667 in 2013. Under the name of 'Draft version' it is reported the result of an extensive work of analysis and consultation aimed at developing and maintaining eBIZ specifications.

In particular, the content of this proposal is the result of various activities, mainly those carried out within the framework of the **eBIZ 4.0 project** funded by the European Commission, call COS-DESIGN-2015-3-06, topic COS-2015-DESIGN-2.

The technical contents are backwards compatible with the latest official published version.

1. BUSINESS DESCRIPTION

1.1 Scope

The present guide has been issued to assist the companies of the Textile-Clothing sector in the implementation of the standard XML document type "RAW MATERIAL DYEING ORDER RESPONSE", providing all the instruction required for its use in the context of e-commerce between Dyeing Subcontractors and their Customers shown in the enclosed diagram All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

1.2 Generalities

The message is issued by the Subcontractor in response to a raw material dyeing commission order. The Subcontractor should return an Order Response for any Order received, where, for each item, he notifies the acceptance as it is (C), the variation (V) or the cancellation (A). Basic function of the message is to notify acceptance or to request modifications or cancellations concerning:

1) suppliable quantities

- 2) dates and places of delivery
- 3) prices

The Order Response can show a number of lines different from the related Commission Order, when variations/cancellations have occurred so as to create the splitting of an Order Line. However the sum of the quantities of the lines in the Order Change (confirmed + varied + cancelled) must

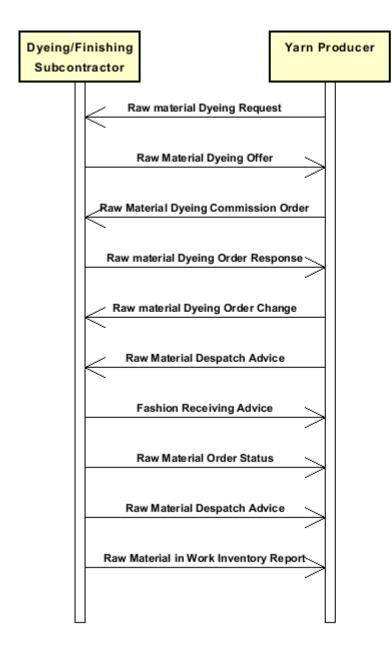

always not less than the sum of the quantities in the original Order.

When the quantity is change the original line must be splitted and the confimed amount and canceled amount should be

explicited through the 'act' flag.

1.3. Possible scenario

Subcontracted dyeing of raw material

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema. In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrencies); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;

- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";

- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...) is shown in square brackets.
